**It is the responsibility of the dealer/customer to inspect all merchandise upon delivery to the customer-designated ship-to address. Any visible damage upon delivery must be noted on the bill of lading when the merchandise is signed for.** Freight carriers will accept responsibility for damage which upon their inspection they deem to be their fault. ## CARE & CLEANING INSTRUCTIONS FOR VENEER PRODUCTS

**Normal cleaning:** Wood veneer products require special care. When cleaning, it is important to use a quality window cleaner which contains no ammonia followed by a dry soft cloth to remove any dampness.

**Polish Suggestions:** To polish veneer furniture, we recommend that you use a quality furniture polish which contains no silicone followed by a dry soft cloth. Using a polish without silicone, will protect the everlasting beauty of this natural wood product.

**Warning –** Using a polish containing silicone may cloud the finish, soften, crack or lift the finish and void your warranty.

## CHARACTERISTICS

Affirm veneer casegoods feature the beauty and variation of genuine select hardwood veneers. Unique grain pattern from piece to piece is a natural characteristic of genuine veneer and creates elegant furnishings, therefore HPFI does not guarantee matching grain pattern. All horizontal and vertical surfaces are veneer protected with durable catalyzed lacquer. Desk pads and/or glass with standoffs will further protect real wood surfaces. A semi-filled, satin style finish creates an elegant, understated presentation. All panels are 3-ply construction with medium density fiberboard (MDF) core and veneer top and bottom. Edges are CNC-shaped, then hand-finished to complement the collection.

## FINISH CHOICES

Affirm is offered in two finishes, complementing all other HPFI veneer collections.

- C** Honey Cherry
- M** Rouge Mahogany

Variation in color is an expected and natural characteristic of real wood. Minor variation in color may occur even with pieces finished at the same time. Aging and light exposure will darken wood. Therefore, HPFI does not guarantee exact color match.

## CARE AND CLEANING INSTRUCTIONS FOR VENEER PRODUCTS

**Normal cleaning:** Wood veneer products require special care. When cleaning, it is important to use a quality window cleaner which contains no ammonia followed by a dry soft cloth to remove any dampness.

**Polish Suggestions:** To polish veneer furniture, we recommend that you use a quality furniture polish which contains no silicone followed by a dry soft cloth. Using a polish without silicone, will protect the everlasting beauty of this natural wood product.

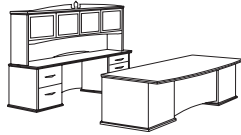

**Warning** – Using a polish containing silicone may cloud the finish, soften, crack or lift the finish and void your warranty.

## FINISH CHOICE

**M** Rouge Mahogany

## IMPORTANT NOTE

## TOPS

High pressure laminate top features the same tops as in the Bedford Series, which has a solid hardwood edge with a slightly different profile than the wood veneer top. Round table top utilizes composite edge.

**LVM Models:** All LVM case tops are 1<sup>3</sup>/<sub>16</sub>" thick with cherry veneer, properly backed, and have solid hardwood edges.

**LVM & LPM Models:** All bridge and return tops feature common grain direction with desk/credenza as well as reverse coped edges for smooth work surface connection with desk/credenza.

**LPM Models:** All units, except bookcases and hutches, can be ordered with a high gloss, high pressure laminate top by specifying LPM. *Example: LPM720.*

## CARE & CLEANING INSTRUCTIONS

**Normal cleaning:** Wood veneer products require special care. When cleaning, it is important to use a quality window cleaner which contains no ammonia followed by a dry soft cloth to remove any dampness.

**Polish Suggestions:** To polish veneer furniture, we recommend that you use a quality furniture polish which contains no silicone followed by a dry soft cloth. Using a polish without silicone, will protect the everlasting beauty of this natural wood product.

**Warning:** Using a polish containing silicone may cloud the finish, soften, crack or lift the finish and void your warranty.

TRADITIONAL VENEER

## CHARACTERISTICS

Westboro casegoods feature the beauty and variation of genuine select hardwood veneers. Unique grain pattern from piece to piece is a natural characteristic of genuine veneer and creates elegant furnishings, therefore HPFI does not guarantee matching grain pattern. All horizontal and vertical surfaces are veneer protected with durable catalyzed lacquer. Desk pads and/or glass with standoffs will further protect real wood surfaces. A semi-filled, satin style finish creates an elegant, understated presentation. All panels are 3-ply construction with medium density fiberboard (MDF) core and veneer top and bottom. Edges are CNC-shaped, then hand-finished to complement the collection.

## FINISH CHOICES

Westboro is offered in two finishes, complementing all other HPFI veneer collections.

**C** Honey Cherry

**M** Rouge Mahogany

Variation in color is an expected and natural characteristic of real wood. Minor variation in color may occur even with pieces finished at the same time. Aging and light exposure will darken wood. Therefore, HPFI does not guarantee exact color match.

## PEDESTAL CHOICES

Choose any pedestal to customize drawer configurations to individual preference. All choices are the same price.

**3** Box/Box/File

**5** File/File

**7** Left Box/Box/File & Right File/File

## CARE AND CLEANING INSTRUCTIONS FOR VENEER PRODUCTS

**Normal cleaning:** Wood veneer products require special care. When cleaning, it is important to use a quality window cleaner which contains no ammonia followed by a dry soft cloth to remove any dampness.

**Polish Suggestions:** To polish veneer furniture, we recommend that you use a quality furniture polish which contains no silicone followed by a dry soft cloth. Using a polish without silicone, will protect the everlasting beauty of this natural wood product.

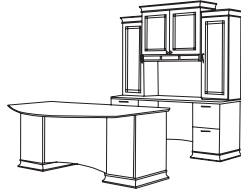

**Warning** – Using a polish containing silicone may cloud the finish, soften, crack or lift the finish and void your warranty.

**CHARACTERISTICS**

Inverness casegoods feature the beauty and variation of genuine select hardwood veneers. Unique grain pattern from piece to piece is a natural characteristic of genuine veneer and creates elegant furnishings, therefore HPFI does not guarantee matching grain pattern. All horizontal and vertical surfaces are veneer protected with durable catalyzed lacquer. Desk pads and/or glass with standoffs will further protect real wood surfaces. A semi-filled, satin style finish creates an elegant, understated presentation. All panels are 3-ply construction with medium density fiberboard (MDF) core and veneer top and bottom. Edges are CNC-shaped, then hand-finished to complement the collection.

**FINISH CHOICES**

Inverness is offered in two finishes, complementing all other HPFI veneer collections.

**C** Honey Cherry

**M** Rouge Mahogany

Variation in color is an expected and natural characteristic of real wood. Minor variation in color may occur even with pieces finished at the same time. Aging and light exposure will darken wood. Therefore, HPFI does not guarantee exact color match.

**PEDESTAL CHOICES**

Choose any pedestal to customize drawer configurations to individual preference. All choices are the same price.

**3** Box/Box/File

**5** File/File

**7** Left Box/Box/File & Right File/File

**9** Left File/File & Right Box/Box/File

**PULLS: STANDARD**

Inverness features traditional design pulls with antique brass style finish. A coordinating round knob is included on overheads with solid wood doors.

**PULLS: ALTERNATIVE**

As an alternative, solid metal, curvilinear pulls are available in three colors at the same price. Specify pull designator after the drawer configuration in the model number.

**CARE AND CLEANING INSTRUCTIONS FOR VENEER PRODUCTS**

**Normal cleaning:** Wood veneer products require special care. When cleaning, it is important to use a quality window cleaner which contains no ammonia followed by a dry soft cloth to remove any dampness.

**Polish Suggestions:** To polish veneer furniture, we recommend that you use a quality furniture polish which contains no silicone followed by a dry soft cloth. Using a polish without silicone, will protect the everlasting beauty of this natural wood product.

**Warning** – Using a polish containing silicone may cloud the finish, soften, crack or lift the finish and void your warranty.

## TACK BOARDS

Fabric covered tackable boards may be ordered separately to fit inside hutches. They can be ordered with any fabric to match your office chairs except leather or vinyl.

**Real.** When you specify **leather furnishings from HPFI, each piece is 100% leather.** And all are real, top-grain leathers. No synthetics. No substitutes. Just real leather selected for quality and characteristics that create unique furnishings.

**Natural.** Leather is a **natural material.** It is an environmentally conscious upholstery cover salvaged as a by-product from meat production processes. Incorporating leather into multiple products – from furniture to clothes – is consistent with “green” efforts to improve production’s impact on our environment.

**Leather.** Leather is **UNIQUE.** Each hide features characteristics developed in nature, distinguishing it from any other hide. Even within a leather hide, variations in color, texture and markings (scars, scratches, wrinkles, etc.) are natural and will appear within a given upholstered piece of furniture. These variations are not imperfections, rather they are the very essence of what makes leather an exquisite and preferred upholstery material.

**LEATHER ADVANTAGES.** History and tradition of use generate a special affinity and emotional preference for leather. Also consider:

- Leather breathes. It can absorb up to 25% of its own weight in humidity and release that humidity, so the body does not perspire on leather as it does on vinyl.

- Leather adapts to the closest temperature. An untouched leather chair remains room temperature. Once you sit down, the leather reaches body temperature, no higher!
- Leather is less permeable than fabrics. This barrier feature protects internal chair components from spills, inhibits dust collection by a chair’s cushioning material and provides easily cleanable surfaces.

**Top Grain.** All are **top-grain leather taken from the outermost layer of the hide, providing the strongest,** softest and most breathable leather from the hide. Additionally, top grains show the natural markings (wrinkles, scratches, scars, etc.) that make each leather unique.

#### THE LANGUAGE OF LEATHER

Leather hides are processed in many different fashions, creating a variety of appearances, tactile qualities and performance capabilities. These processes and the resulting characteristics create a leather language used to classify leathers as outlined below.

**Full vs. Corrected Grain.** Full grain leathers exhibit more of the natural variation, texture and markings of the animal. These leathers are generally softer than corrected leathers. Corrected grain leathers have been mechanically altered through buffing, sanding or embossing to create more consistent grain pattern and uniform appearance.

**Semi-Aniline.** Starting with the same base as full anilines, the semi-aniline is a soft leather featuring a transparent finish that improves light and stain resistance. Slight pigmentation may be added to minimize color variation within the hide.

**Pigmented.** These leathers feature pigment dye applied by machine spray or roller coating, then followed by a finish coat to seal the pigment. Pigment/sealer increases a leather’s resistance to fading and wearing while decreasing the softness of the material. Pigmented leathers are easier to clean and care for than non-pigmented leathers.

**Pullup.** Pullup leathers derive their color from waxes or oils, which dissipate and become lighter in color when the leather is pulled, as done during the upholstery process. This creates worn, weathered, distressed appearance typically found only on furnishings subjected to years of use.

**Hand Antiqued.** As the name implies, these leathers are handcrafted using traditional leather techniques.

**Sauvage.** Subtle, abstract two-tone finishes on leather provide visual depth and interest to a leather and are known as Sauvage.

HPFI can work with our leather supplier partners to color match an existing leather installation. There is a minimum of 500 square feet. Lead time to color match will take 5 - 6 weeks.

**Note:** HPFI leather seating employs multi-piece backs and sides to improve yield of natural leather hides.

**Custom Finishes** now available at \$100 one-time net charge for easy coordination with all elements of a facility. Contact Customer Service for details.

HPFI offers reception and ergonomic seating that has been tested and certified by an independent laboratory to pass California Bureau of Home Furnishings and Thermal Insulation's Technical Bulletin #133 flammability requirements. These are the most stringent U.S. flammability requirements. Testing includes full-scale burn testing of a finished, upholstered chair, which is destroyed after a single test. HPFI has chosen to use a barrier cloth or fire-blocking layer between the foam cushioning and the external upholstery cover in order to comply with California Technical Bulletin 133.

All HPFI TB 133-certified chairs have been tested and certified in 100% recycled polyester fabrics from the Foundation 10 collection, which offers 27 solid color crepe fabric options. These fabrics also pass 1,000,000 double rubs in surface abrasion testing (ASTM D 4157 Wyzenbeek Test). Reference Foundation 10 fabrics on page 239.

Unless otherwise noted, any upholstered HPFI reception or ergonomic seating unit can be specified and manufactured to comply with California Technical Bulletin #133. The upcharge for each piece is determined by multiplying its fabric requirement (as stated in this price list) by \$66 List per yard.

Example: For a Claudia Club Chair #5301, you would add \$412.50 List (6.25 yards at \$66 List per yard) to the regular list price.

If laboratory certification is required for a specific style and upholstery combination, the following costs to the requesting party will apply:

- \$1,000 NET for testing and transportation of sample
- Cost of test sample including appropriate upcharge as outlined above.

An additional 6 weeks will be added to the standard lead time for products requiring testing.

For more information and California Technical Bulletin #133 pricing, please contact your HPFI Customer Service Representative.

Sentinel™ finish employs silver ions - a powerful, natural antimicrobial, antibacterial which assists in preventing the spread of infections without harm to human health. Disease-causing organisms on wood chair frames with Sentinel™ antimicrobial silver remain latent, are unable to propagate and soon expire. Sentinel™ antimicrobial cannot be washed away, worn off or depleted overtime. Its effectiveness is as powerful at the end of the life cycle as it is at its start.

PLEASE NOTE: Variations in wood color and grain pattern, contribute to the natural beauty of wood. The natural characteristics of the different species of wood, add to the distinctiveness of furniture and cannot be considered defects.

Examples of natural characteristics; pitch pockets (which are common in fruit woods such as cherry), appear as a dark spot in the grain that may not always completely accept finishing materials, darkness of end-grain on the edges of desktops, color variation of growth ring commonly called "tiger striping", slight variations in color from piece to piece.

All real wood products exhibit a certain amount of color variation when finished. This color variation is most often caused by the natural difference of initial color of the raw wood. This initial color, as with many other of the characteristics of real wood, is naturally occurring and contributes to the beauty of the finished product. These color variations are more noticeable in light colored woods finished with a clear lacquer finish. We strive to control variations in color as much as practical, however, slight variations are not defects.

## DIMENSIONS

All size dimensions are nominal and subject to change. If you must have exact dimensions, please contact your Customer Service Representative. Worksurface dimensions will vary due to edge profile treatment. Always measure actual top before ordering glass or other cover to fit tops.

## FABRICS

Our patterns offer the best in appearance, durability, and value. Please refer to the seating warranty section on page 6 for more information. Fabrics are ordered as soon as we receive your order. Therefore no cancellations or changes are allowed once your order is received and the fabrics are ordered. Please let your customer know this when they are making their fabric selections.

### A. FABRIC INTRODUCTION

Even though the fiber industry has not developed any totally new fibers in the past decade, researchers are making strides in the blending and finishing of fibers to produce new aesthetic qualities and enhancing existing performance characteristics. Man-made fibers such as acrylic, olefin, polyester and nylon have achieved new levels of performance with current changes necessitating a true evaluation of each fabric on its own merit. Do not assume that a specific fabric is always the best. Consult the test results on the reverse side of the fabric card and evaluate its performance for your particular application. HPFI chooses only those fabrics that attain the upper portion of the durability spectrum.

### B. FABRIC TESTING TERMS

- Surface Abrasion** - The degree to which a fabric is able to withstand surface wear, rubbing, chafing, and other friction forces. Light Duty Fabrics – 3,000 cycles (double rubs) Medium Duty Fabrics – 9,000 cycles (double rubs) Heavy Duty Fabrics – 15,000 cycles (double rubs)
- Crocking** - The degree of resistance of material to change color characteristics, or transfer its color to other materials in any environment during the life of the fabric.
- Tear Strength** - The force necessary to tear a fabric, usually expressed in pounds or in grams. The most commonly used method for determination of tear strength is the ELEMENDORF tear test procedure.
- Tensile Strength** - The actual number of pounds of resistance that a fabric will give to a breaking machine before the material is broken.
- Fadometer/Color Fastness** - The fadometer (light) test determines the resistance of a specific fabric color to prolonged exposure to sunlight utilizing a water-cooled xenon lamp fading apparatus for simulation. The color fastness test determines the degree of color retention and change in shade (or lack of) during the normal life of the fabric.
- Fire Retardant** - Fabrics treated with special chemical agents or finishes to make them retardant or resistant to burning. Today, many fabrics achieve this property by using fibers that have this property built directly into the polymer. Fire retardant coatings or specifications vary according

to code requirement. Please consult fabric specifications listed with each pattern in upholstery catalog for specific code acceptability.

- Dupont Teflon® Fabrics Protector** is a durable fluorochemical that guards against spills, stains and soiling, and is always professionally applied. Dupont Teflon® keeps stains from penetrating fibers, so oil and water based stains can be blotted up quickly and dust and dry soil can be easily wiped away. Immediate clean up is required to prevent staining.

### C. FIRE RETARDANT PRODUCTS & SPECIAL CODES

- Treatment or finishing of fabrics has become varied and complicated because many states and municipalities have developed their own criteria for fire retardant coverings. Although attempts have been made to offer a fabric which will pass as many of these codes as a group (e.g. Boston Fire Dept. Std., The Port Authority of N.Y. and N.J., and Calif. Bulletin 117-E), it may be necessary to specifically treat a fabric for a special code. If special treatment is required, or if treatment of a current fabric offered by HPFI to meet a certain code is required, please contact our Customer Service Department for costing.
- Consult specifications in upholstery catalog for pertinent fire code ratings and specifications, or request a specification sheet from our Customer Service Department.
- Please remember that a fire retardant fabric isn't fireproof or flameproof. The purpose of the retardant finish is to make fabrics flame resistant to provide time for egress.
- California Technical Bulletin #133 requires heightened levels of flammability resistance and special testing. High Point offers a wide range of seating tested to Cal 133. Contact customer service for more information.

### D. CLEANING CODES:

- Each fabric offered by HPFI has a cleaning code letter, assigned by the fabric manufacturer for a specific pattern, and listed on the swatch card. The cleaning codes are as follows:  
**W** - Water based cleaners may be used.  
**S** - Solvent based cleaners may be used.  
**WS** - Water or solvent based cleaners may be used.  
**X** - Do not use any cleaning fluids.
- To prevent overall soiling, frequent vacuuming or light brushing to remove dust and grime is recommended.
- Always pre-test a small inconspicuous area before proceeding to remove the stain.

### VINYLS

**Vinyl Introduction:** Vinyl coverings are normally 100% virgin vinyl (a synthetic formulation) supported by a man-made

backing, sometimes textured and then surface finished or capped with a chemical film. Vinyl can be formulated to enhance its resistance to bacteria, flammability, discoloration, abrasion and chemical attack. Consult the technical information on the back of the vinyl swatch cards to choose the desired characteristics for the environmental setting in which the seating units will be used.

**Vinyl Protection:** Periodic cleaning of the vinyl by washing with lukewarm water and a mild soap will prevent hardening, cracking and peeling due to body oils and oil products used for grooming. Clean with wet sponge and dry with dampened cloth or sponge. Certain commercially available products clean routine spills effectively.

### LEATHERS

**Leather Introduction:** Leather, by virtue of its natural inherent beauty, warmth and durability, creates aesthetic appeal for those individuals desiring the very finest in office seating. The exclusive use of top grain cowhides by HPFI in Grade L, assures the customer of genuine leather as opposed to split or bonded leather substitutes. The growth marks and healed scars which occur during the animals' lifetime give leather its distinguishing "signature". These signatures will appear on the chair leather, assuring the customer of the use of authentic top grain hides. Genuine top grain leather mellows with age and gains a quality and value which is unlike any man-made substitute.

### Full and Top Grain Leather vs. Split

**Leather:** When the hide is separated from the animal, it can be as much as 3/4" thick. A splitting machine then splits the hide into layers of desired thickness. Only the first cut is used in HPFI chairs, insuring maximum strength and beauty of the product. To remove spots and spills, wipe excess liquid up immediately with a clean absorbent cloth or sponge. If necessary, use clean lukewarm water only and let air dry naturally. If water is used, clean the entire area where the spot occurred. An example would be the entire seat cushion or entire arm. DO NOT dry wet areas with hair dryers, etc. For butter, oil or grease, wipe excess butter, oil or grease off the leather with a clean dry cloth, then leave it alone as the spot should dissipate into the leather in a short period of time. DO NOT apply water or try to wash such spots.

**Please Note:** These are recommended or suggested methods of cleaning. The manufacturer is not responsible for damage incurred while cleaning.

## ERGONOMIC FEATURES & APPLICATIONS

Ergonomics, also referred to as Biotechnology of Human Engineering, is an applied science concerned with the characteristics of people that need to be considered in designing and arranging things that they use in order that people and things will interact more effectively, comfortably, and safely.

With respect to the office worker, ergonomics is applied to accommodate specific work postures that reduce or eliminate static loading of muscles, particularly in the neck, shoulder and lower back regions. These are the primary areas where musculo-skeletal illnesses occur, causing discomfort and pain.

In recent years we have, through the study of ergonomics, gained an increased understanding of the importance of prevention, in contrast to cure, for the seated individual. The result is new seating designs incorporating proper curvatures as well as individual adjustability. This seating construction has the following features and benefits:

- Front of seat is a “waterfall” shape - avoids restriction of circulation of blood in thighs and lower legs.
- Back support is designed with a compound curve to support lumbar vertebrae and help back hold a slightly forward arch. Fixed Lumbar Support has been incorporated into various chairs. Permanent fixed support allows proper passive ergonomic alignment of the skeletal frame.
- Seat cushion has only light but relatively firm padding so the buttocks can change pressure areas easily. Most seats are constructed with matrix support, as opposed to a platform (solid) seat pan. This increases comfort and works to reduce or eliminate pressure areas.
- Seat height is adjustable to accommodate both taller & shorter workers.
- Seat controls are designed to be able to adjust both back and seat for various positions and tasks.
- For safety, the chair bases have 5 prongs. This also makes movement easier.

As well as having all of the above features and benefits required to satisfy tasks that need to be performed. HPFI seating blends into the most discriminating office environment. Actuating paddles and knobs are positioned within easy reach from the seated position, and at the same time placed to avoid injury or inadvertent operation.

## BASES

Optional additional casters are available.

**Our Most Versatile Modular Collection**

**Steps Modular** lounge seating components can be configured, expanded and reconfigured as your business grows and changes. Every component is a seating module, ensuring maximum seating capacity and optimum space-efficiency in your facilities.

Plus, seat/back modules are field replaceable, offering renewability down the road.

Steps Modular configuration

**Steps Modular Details**

- Full-to-the-Floor bases with radius corners
- All Steps units are available with left or right (facing) arms.
- All units are shipped with metal fasteners pre-bored into the seat frames (nuts and bolts supplied).

7436 90° Corner Unit with upholstered base

**Upholstered Base or Black Finish Base**

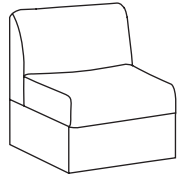

- Full-to-the-Floor bases are available fully upholstered.
- Even more modest in price, Steps-Black-Base models feature radius corners, sensitive to waiting areas where children may frequent. Black, textured finish helps limit wear.

**90° Corner Unit**

The 90° Corner Unit can connect with seat modules on either side. Diagonal front increases leg room; diagonal back enhances lumbar support and comfort. In corner applications, the open area behind the unit can accommodate a lamp, plant, etc.

## Environmental and Sustainability Efforts

For more than 50 years, HPFI® (High Point Furniture Industries) has been building furniture in the United States with respect to our environment and our community. As a world-class manufacturing operation, we strive to reduce and eliminate our impact on the environment. We recycle and reuse wherever possible. When viable and acceptable to our customers, we incorporate recycled and recyclable materials into our finished products.

HPFI is utilizing the Business and Institutional Furniture Manufacturer's Association's (BIFMA) e3 standard to identify and certify the levels of environmental achievement as well as identify specific contributions of LEED points. All HPFI products are (Gold) level II and tested to the BIFMA X7.1 Furniture Emissions Standard.

As a manufacturer of wood products, we recognize that our materials come from natural resources, which must be respected. Supplier partners are suggested to hold this same respect in harvesting and processing natural resources for supply to HPFI.

Laminate casegood materials are Scientific Certification Systems (SCS) certified for FSC-STD-40-004 v2-0, FSC-STD-40-003 and FSC-STD-40-005 v2-1 standards as well as Composite Panel Association (EPP) certified for CPA 2-06 and CPA 3-08 standards. The cores of our casegood products come from suppliers that meet Sustainable Forestry Initiatives (SFI) standards and are over 80% recycled wood fibers.

Engineered wood components for upholstered seating products also meet SFI standards and meet CARB 2011 Standards -.08 ppm formaldehyde emission level. Seating foam is CFC-free and includes rapidly renewable bio-based materials.

Dust collection systems are in place to collect residual wood released during processing of raw wood materials into finished components for final assembly. The collected sawdust is reused for generating fuel, reducing waste as well as conserving another valuable resource, petroleum.

Proper finishing equipment is installed and maintained to appropriately collect any negative-impact materials. These are turned over to environmental professionals that specialize in safe and effective handling of such materials, further protecting our world.

We are committed to providing environmentally-conscious product solutions. HPFI actively markets Terratex-classified upholstery fabrics that are both 100% recycled (or bio-based) as well as completely recyclable (or compostable). These fabrics are manufactured from both post-consumer polyester (waste material left over once a consumer has used a product, such as a soda bottle) and post-industrial polyester (waste generated by an industrial process before the polyester is used by a consumer). In Life Cycle Assessments, Terratex-classified fabrics showed significantly lower environmental impact than fabrics made with virgin polyester across all twelve of the categories studied.

All corrugated cardboard material and containers used in the packaging and transport of our furniture products are made with a minimum of 41% recycled material (post-consumer and/or post-industrial) and meets standard performance requirements.

All of our associates are involved in environmentally-friendly practices. We utilize a 4-day work week, thereby reducing fuel consumption in both operations and commuting. Our sales brochures are printed on FSC-certified paper. Multiple collection bins are placed throughout our facilities for recycling to divert all production materials from landfills and recycled. Office paper, bottles, cans, etc. are also collected in our offices for recycling.

At HPFI, we understand the future does not belong to us, nor does the earth, nor its resources. The maintenance of our environment and a commitment to sustainability is an ongoing responsibility that we share with every person, organization and industry enjoying the abundance of this earth. We pledge to continually respect our resources and build community for those of us here today and for those who will follow.

Our sustainability efforts extend beyond the materials and processes involved in the manufacture and fabrication of our products. We also address end-of-life opportunities for our furniture. Additionally, our efforts involve social responsibility with HPFI associates as well as our business partners.
